LF PCN#A0133a Notification of change to Font tonality on MEGA fuse

Dear Valued Customer,
Littelfuse Inc. would like to notify you of a change in the font tonality of the rating mark on some of the MEGA fuses. Littelfuse is changing the rating mark font tonality to improve the contrast against the black resin of the housing for better performance at our customer's automated vision inspections.

No change is made to the form, fit or function of the part; nor is any change made which may alter the performance of the part. Only the tonality of the font will change.

Below are a couple of examples showing the improvement:

This change will be implemented as a running change and will start producing parts with this improvement by **October 2, 2017**.
