

Leuven, Sep 12, 2019.

Dear customer,

As part of our Products Lifecycle management, Option will put the following products in end-of-life mode:

- CG2101-11921 WLAN I expansion card (client/access point 9)

This decision is motivated by the fact that the Marvell chipset that is used in this product is declared EOL and no longer available in the market.

This product is replaced by this part number:

- CG2102-11994 WLAN II expansion card (client or access point 32)

This replacement product will use a Redpine WLAN module and offers similar functionality compared to the product it replaces. These are the main differences:

	CG2101-11921	CG2102-11994
WiFi bands	2.4GHz	2.4GHz and 5.0GHz
Client/access point	Both, simultaneous	Both, one or the other
Nr of clients	10	32

Orders for the EOL products are accepted until end of October 2019 for delivery until end of Dec 2019. The replacement product is already available.

Best regards,

Patrick Willekens
Head of Sales
