## Preface

### Scope and purpose

This document provides information about the usage of the OPTIREG™ linear voltage regulator TLT807B0EPV demoboard. The OPTIREG™ linear voltage regulator TLT807B0EPV demoboard is used to demonstrate the ultra low quiescent current linear voltage regulator TLT807B0EPV in a PG-TSDSO-14 package from Infineon Technologies AG. Please also refer to the corresponding [datasheet](#).

### Intended audience

This document is intended for engineers who develop applications.

## **1 Introduction**

### **1 Introduction**

This document describes the OPTIREG™ linear voltage regulator TLT807B0EPV demoboard and its functionality. It includes a brief summary of the used passive components, as well as a short explanation for the correct usage of the board. For specifications and parameters please refer to the [datasheet](#).

#### **1.1 General description**

The TLT807B0EPV is a standby linear voltage regulator which is designed for 24 V systems and the demanding environment of truck applications. It is optimized for low drop out voltage and low current consumption in off mode. Additionally it can withstand high voltage transients.

#### **1.2 TLT807B0EPV features**

To meet the automotive standards the TLT807B0EPV comes with a feature set that includes:

- Output voltage accuracy  $\pm 2\%$
- Enable: reduces the current consumption to a minimum while the application is not used
- Adjustable output voltage: 1.2 V to 20 V
- Protection features:
  - Output current limitation
  - Reverse polarity protection
  - Overtemperature shutdown
- Protected against high input transients up to 58 V for less than 400 ms
- Green Product (RoHS compliant)

#### **1.3 Block diagram**

[Figure 1](#) shows the device's basic features and their interaction.

1 Introduction

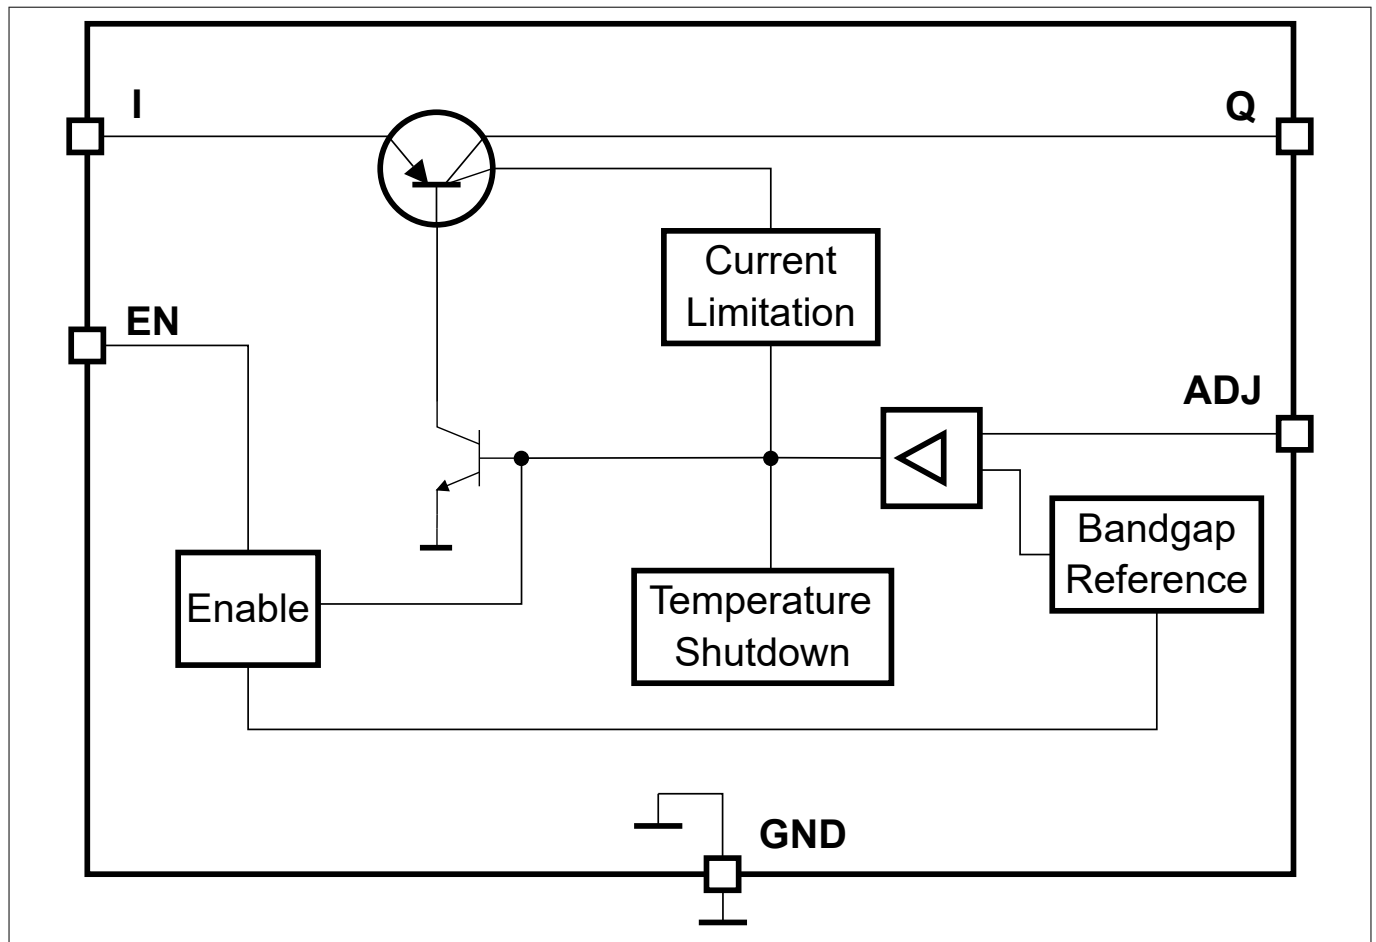

Figure 1 Block diagram TLT807B0EPV

**2 Demoboard**

## 2 Demoboard

The device is available in a PG-TSDSO-14 package. Basic functions of the device can be evaluated with it, as well as identifying the proper configuration. Apart from that it may serve as help to observe the device behavior outside of the application and under isolated conditions of stress.

Figure 2 shows the OPTIREG™ linear voltage regulator TLT807B0EPV demoboard.

**Figure 2** OPTIREG™ linear voltage regulator TLT807B0EPV demoboard

## 2 Demoboard

### 2.1 Operating conditions

To avoid electrical damage of the demoboard, the operating range defined in [Table 1](#) must be followed.

**Table 1** Operating range<sup>1)</sup>

Parameter	Symbol	Limit values		Unit	Note
		Min.	Max.		
Board supply	VIN	0	45	V	<sup>2)</sup> Power supply
Regulator output	VOOUT	0	36	V	Regulated output voltage
Enable input signal	EN	0	45	V	<sup>3)</sup> Enable signal to switch on the regulator

1) The demoboard operates at an ambient temperature of 25°C.

2) Functional input voltage range: 2.75 V to 42 V.

3) Absolute maximum rating.

### 2.2 Demoboard configuration

The demoboard enables the operator to use and test the basic function set of the TLT807B0EPV. This includes following features:

- Connecting the Enable input signal to the supply voltage VIN via jumper JP1
- Placeholder for additional input capacitor (C3)
- Placeholder for additional output capacitor (C1)
- Configure the output voltage via the resistor divider ( $R_1$ ,  $R_2$ )
- Disable the resistor divider  $R_1, R_2$  via jumper JP2 and JP3
- Connecting a external resistor divider via the banana jack ADJ

For further information on configuration and components see [Schematic](#).

#### 2.2.1 Enable function

The jumper JP1 can be used to connect the EN signal to the supply voltage VIN or to pull it to GND. Furthermore an external enable signal can be applied by using the banana jack EN.

**Table 2** Jumper JP1 setting for enable function

JP1	Enable function
Pin 3 to pin 2	EN is connected to the supply voltage VIN; the regulator is enabled while it is supplied
Pin 2 to pin 1	EN is pulled to GND
Open	EN is floating, external enable signal can be applied via the banana jack EN

#### 2.2.2 Adjustable output voltage

The TLT807B0EPV is an adjustable standby linear voltage regulator. Therefore, the OPTIREG™ linear voltage regulator TLT807B0EPV demoboard provides the option to configure the external voltage divider in two ways:

1. Changing the ratio of the voltage divider  $R_1$  and  $R_2$
2. Apply a feedback off board via the banana jack ADJ<sup>1)</sup>

For dimensioning the voltage divider, use the following formulas:

<sup>1</sup> Make sure that the on board voltage divider is disconnected by pulling jumper JP2 and JP3.

## **2 Demoboard**

$$V_Q = \left( \frac{R_1}{R_2} + 1 \right) V_{\text{ref}}$$

### **Equation 1**

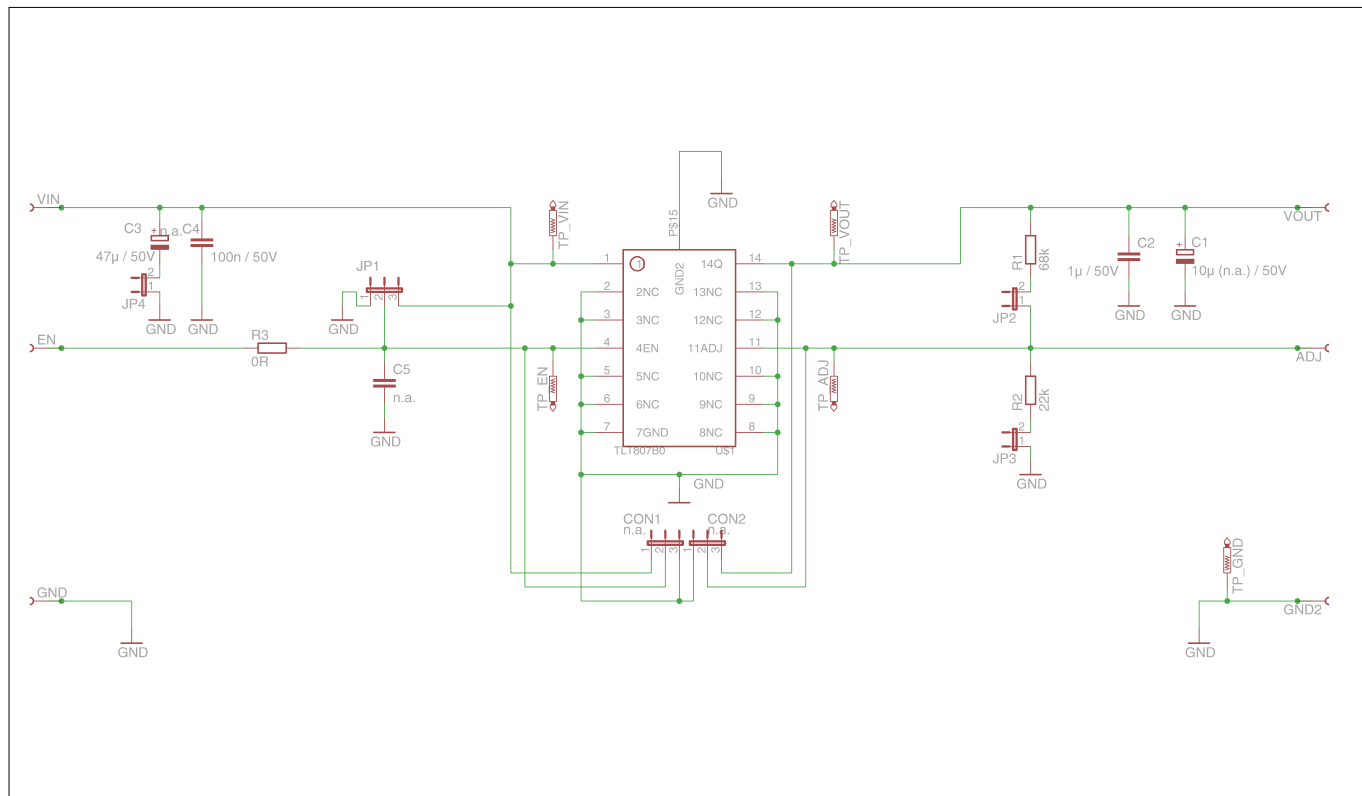

$$R_1 + R_2 \leq 250 \text{ k}\Omega$$

### **Equation 2**

## **5 Restrictions**

The demoboard is only intended to be used for evaluation and test purposes. Basic safety features and functions can be tested with it. It must not be used for any field production.

For further information please refer to [www.infineon.com](http://www.infineon.com).
