RE: LINK-NP3 & LINK-NP5 Usage with A2 & A3 Modules
Products affected: Configurations using OP A2 and/or OP A3 Modules connected in parallel.

Vox Power is advising all direct and indirect customers of a clearance issue when parallel connecting the OP A2 and/or OP A3 modules using the existing Link-NP3 or Link-NP5 parallel connection accessories.

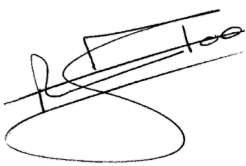

It can be seen from the below images that the existing parallel links (Link-NP3 & Link-NP5) come within 0.5mm of the OP A2 or OP A3 heatsinks when fitted in two or three module parallel configurations.

The Link-NP3 and/or Link-NP5 should not be used to parallel connect the 300W dual slot OP A2 or OP A3 modules due to risk of shorting to the module heatsink/configuration chassis. Vox Power will design and release two new parallel links for exclusive use with the 300W OP A2 & A3 modules imminently and will circulate an updated accessory datasheet showing the new links and part numbers.

Any existing or pending customers who use or intend to use the existing Link-NP3 or Link-NP5 accessories should contact Vox Power for further details and corrective actions.

Sincerely

Marco Prinsloo - CEO
