PowerFilm, Inc. has changed the Solar Development Kit with Nordic BLE (DEV-BLE-NS). This updated kit features our new version of the LL200-3.6-75 Indoor Solar Panel. Previously the panel featured longer silver ink lines across each cell (what we call “fingers”). These fingers help collect current; outdoor panels require long fingers since the generated current is high. The LL200-3.6-75 is an Indoor Light Series panel, and the current is far lower, so removing these “fingers” is purely cosmetic and will not affect performance.

Once your current inventory of this product is sold, please update your product photos and documentation with the items listed below.
