Notification of Part Number Adjustments for U.S. Sensor/Littelfuse Products

Effectively immediately, the part numbers for U.S. Sensor/Littelfuse products will no longer include the Revision levels within their part numbering system. For example, a part number such as TO103J2K-RA will no longer include the -RA and will be referenced as TO103J2K.

Appendix A of this letter includes the affected part numbers currently shown on the Digi-Key website.

There will be no change to form, fit or function or any other aspect of the parts. The only change is to remove the reference of the Revision level in the part number itself.

Should you have any questions, please don't hesitate to contact myself or your Littelfuse representative.

Thank you.
