To: Coto Technology Customers, Representatives and Agents

From: Bob Gentry
Director of Product Management

Subject: Discontinued Products

As part of our normal annual product lifecycle review, Coto has completed an analysis of our product offering focusing on variables such as supplier capabilities and market demand. As a result, Coto has concluded that certain relay families and custom relay designs will be made obsolete.

Due to several suppliers' inability to meet Coto's quality and delivery requirements, we will not be able to support additional builds associated with our normal obsolescence policy. In most cases the products have not been manufactured for over five years due to lack of demand, making it difficult to acquire any materials.

The specific products include the subject of your enquiry:

- CS139

We are recommending that your customers convert to the drop in replacement CS140 which has a higher switching Voltage of 1KV.

We appreciate your support and look forward to providing you with new and exciting products and designs by Coto, your technology leader in Providing Small Signal Switching Solutions.
