1. Purpose

The purpose of this notice is to announce that the VDE approved option code "QF" is being obsoleted from the DF series rockers. The VDE logo will be removed from the housing of all DF series rockers.

The QA option code will remain and signifies UL recognition. That UL recognition is to UL1054 and applicable Canadian standards.

2. Reason for discontinuation

C&K has transferred the manufacturing of this series from the Costa Rica facility to C&K Huizhou, China. In order to be more efficient and not have multiple certifications to maintain, we have chosen to go with one UL certification which covers US and Canadian based recognition.

We already have UL recognition to Canadian (CSA 22.2 no. 55) standards and UL 1054. The DF series will no longer have international, IEC standard based, approvals.

Product which has been transferred from Costa Rica to Huizhou, China will bear the new logo(s) below.

The c in front of the cRUus logo below signifies the product is a UL recognized component which has been tested to Canadian standards.
(CSA 22.2 no. 55)

The us after the cRUus logo below signifies the product is a UL recognized component which has been tested to US standards.
(UL 1054 and/or UL 61058)

At the end of 2013 we will be cancelling our VDE licenses.
