## FEATURES

- **UL Recognized**  File E151738 to UL1577
- **No Secondary Power Supply**
- **Drives Any Logic Level FET**
- Low Input Current: 1mA Typ (LTC1177-5), 2.5mA Typ (LTC1177-12)
- Turns On in 1ms Typ and Turns Off in 1ms Typ
- 2500V<sub>RMS</sub> of Isolation Voltage
- Isolates Input from High Voltage Transients at Load
- Clean, Bounce-Free Switching
- Current Limit
- Small Outline Package

## APPLICATIONS

- Solid State Relay
- Isolated Solenoid Driver
- Isolated Motor Driver
- Isolated Lamp Driver

## DESCRIPTION

The LTC<sup>®</sup>1177-5/LTC1177-12 are isolated high side MOSFET drivers. When used with an external N-channel MOSFET, the LTC1177-5/LTC1177-12 form an isolated solid state switch for reliable bounce-free switching operation. The output does not require an auxiliary power supply to maintain an on-state condition.

Two lead frame capacitors are used to transfer energy from the input to drive the gate of the MOSFET and provide the necessary isolation. Unlike optoisolated FET drivers, the input current for the LTC1177-5 is only 1mA and 2.5mA for LTC1177-12. It also does not have the aging problems endemic to optocouplers.

Both devices provide 2500V<sub>RMS</sub> (1 minute) or 3000V<sub>RMS</sub> (1 second) of output-to-input isolation.

The LTC1177-5/LTC1177-12 are available in the 18-pin PDIP or 28-pin SW package.

 LTC and LT are registered trademarks of Linear Technology Corporation.

## TYPICAL APPLICATION

Isolated High Side Switch

Input vs Output

1177 TA02

# LTC1177-5/LTC1177-12

## ABSOLUTE MAXIMUM RATINGS

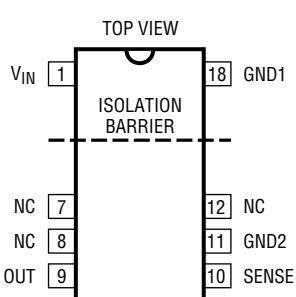

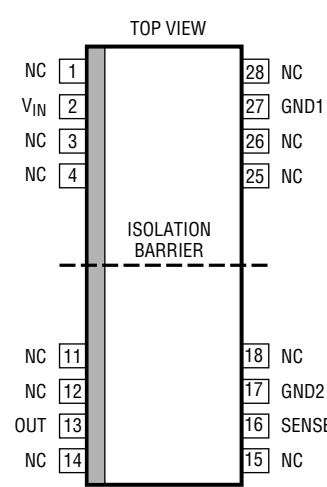

### Input Voltages

$V_{IN}$ (LTC1177-5)	6V to (GND1 – 0.3V)
$V_{IN}$ (LTC1177-12)	13.2V to (GND1 – 0.3V)
Sense (LTC1177-5)	6V to (GND2 – 0.3V)
Sense (LTC1177-12)	12V to (GND2 – 0.3V)
Output Voltages	12V to (GND2 – 0.3V)

### Operating Temperature Range

Commercial	0°C to 70°C
Industrial	–40°C to 85°C
Storage Temperature Range	–65°C to 150°C
Lead Temperature (Soldering, 10 sec)	300°C

## PIN FUNCTIONS

**$V_{IN}$ :** Voltage Input,  $5.25V \geq V_{IN} \geq 4.75V$  (LTC1177-5) and  $12.6V \geq V_{IN} \geq 11.4V$  (LTC1177-12). Connect a  $0.01\mu F$  capacitor between  $V_{IN}$  and GND1 when the source impedance is high or the  $V_{IN}$  connection is long.

**OUT:** Output Voltage. The output voltage level is 8V (typ) for SW package and 7.5V (typ) for N package (LTC1177-5) with 5V at  $V_{IN}$  pin; 5.7V (typ) for SW package and 5.2V (typ) for N package (LTC1177-12) with 12V at  $V_{IN}$  pin. This pin is to drive the gate of the external N-channel MOSFET.

**SENSE:** Current Limit Sense Input. Connecting a  $1\Omega$  resistor from the Sense pin to GND2 limits the current through the power MOSFET to 620mA (typ).  $I_{LIM} = 620mV/R_{SENSE}$ .

**GND2:** Floating Ground Connects to the source of the external N-channel MOSFET.

**GND1:** Input Ground. The ground connection of the input control signal.
