
Product Change Notification

PCN Publish Date: July 18, 2017 - Rev 1 – August 11 2017

PCN #: PCN071817 – 68855 (005798) change base thickness and overall height thickness

Change Title: Base change from .08” to .125” thickness and height change from .460” to .505”

Products Affected: See Appendix A

Description of the Change: Due to insufficient mass at base to extrude consistently and to specification, we needed to change the base thickness of this extrusion from .080 inches thick to .125 inches thick as well as the overall height from .460 inches tall to .505 inches tall. The extruder could not supply to original dimension consistently without too much fall out and out of specification material. The flatness was also affected at the original base thickness in that the material would push extremely out of flat.

Scheduling of Change:

Sample Date: Sample and production availability will be 6-8 weeks from approval date.

Volume Production: This change will allow us to consistently receive in material to specification.

Timing of change: Immediately

Customer Impact: Customer will have to determine if the new dimension meet their criteria; else there will need to be added machining or a change of raw material.

Qualification Results:

Contact Information: For questions please contact Aavid Thermalloy Technical Support at your local sales office.
